DETAILED ACTION

Response to Amendment

1. Applicant's response to the office action filed on August 23, 2006 has been entered. Claims 1-55 have been canceled and new claims 56-60 have been added. The claims pending in this application are claims 56-60.

Election of Species

2. In reviewing newly added claims 56-60, the examiner notes that this application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- (1) fungicide is strobilurin analogue or kresoxim-methyl (claim 56)
- (2) fungicide is famoxadone (claim 56)
- (3) fungicide is fenamidone (claim 56)

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the

Art Unit: 1634

limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a). The following claim(s) are generic: claims 57-60.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because the species lack the same or corresponding special technical features since these species have different chemical structures.
